

```
curl -o- https://raw.githubusercontent.com/nvm-sh/nvm/v0.34.0/  
install.sh | bash  
. ~/.nvm/nvm.sh  
nvm install node  
node -e "console.log('Running Node.js ' +  
process.version)"
```

```
git clone https://github.com/AkshayaPk/Sample-  
Application.git
```

```
npm install -g @angular/cli  
npm install - Inside frontend folder
```

Modify both the constants and the rest-endpoints  
files  
ng build

Associate an IAM role with the EC2 instance  
Copy contents of dist/<app> directory to the root  
of the S3 bucket  
aws s3 cp --recursive dist/<app>/ s3://  
<bucketname>  
Enable static website hosting to check.
